PROFILE

Web Developer with more than 2 years experience in creating responsive and interactive user interfaces. Specializes in PHP, HTML, CSS and JavaScript. Aims to create an innovative and functional user experience.
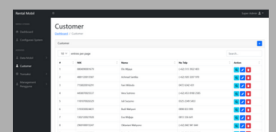

WORK EXPERIENCE

PT. Inova Medika Solusindo
Full Stack Web Developer   NOV 2021 - NOV 2023

- Develop and maintain websites using PHP programming language with YII framework
- Perform source code management (workflow) according to existing standards
- Create new menus (new features) on the system based on analysis results that have been carried out by Business Analyst and System Analyst or user/client
- Modify (improve) the system based on user/client requests by carrying the clean code concept
- Repair system bugs/errors based on reports from System Analyst, System Support or user/client
- Analyze problems that arise due to code that causes the system to malfunction or inconsistent/invalid data
- Identify problems that may arise if there are changes in the system
- Make website pages attractive, dynamic, and interactive for use by users
- Document code that has been done according to standards so that it can be read by other programmers

RECENT WORK

Laravel 10 : Rental Mobil

- User-friendly interface for easy car rental management
- Role-based access control: assign different roles to users, such as super-admin, admin, or user, to control their access and permissions within the system.
- System configuration: easily customize and configure system settings, such as logo system, copyright name, app name, and other identity, to tailor the car rental management system to your business needs.
- And many more...
